

When we drinking unfiltered water, our body becomes the filter

Filter technology

5-stage filtration and cleaning system

- KDF® - special patented filter technology
- Carbon filter made of premium coconut rind granules
- special micro fine filter

Our filtration systems possess bacteriostatic called KDF®, patented and subjected to severe laboratory tests (U.S. Patent 4,642,192), by which, heavy metals are drastically reduced or completely eliminated.

Efficient filtration of, for example: chlorine, lead, arsenic, barium, cadmium, chromium, selenium, mercury, iron and other heavy metals which may occur in the water.

KDF® is listed under NSF International, Standard 61 (Health Effects) for water treatment plants.

(NSF = recognized, independent, certification organization).

The granular activated carbon of the coconut shell base eliminates bad taste and odor from water as well as chlorine, THMs, PCBs and most organic toxic compounds that may be found therein

What can our filters do?

Advantages of soft and pure Water

- Luxuriate in skin-friendly soft shower/bath water
- Relish the feel of soft skin and silky-smooth hair
- No more dryness
- Soft, clean water is imperative for people with skin problems such as dermatitis and allergies
- Reduction of soap and shampoo consumption
- Soft water improves the taste of food and drinks
- Tea and coffee smell and taste better
- Ideal for diluting fruit juice and refreshments and making ice cubes
- Pure, soft water improves plant growth

Performance

- efficient filtration of harmful substances
- vital minerals remains up to 100 %
- basic water with high pH value and electron-rich (ionising)
- quick and direct filtering
- no water storage (cistern) necessary

Savings

- less Shampoo and soaps
- no loss of water
- no electricity costs
- no maintenance costs
- long working life
